

# CTRL-Z

## WHO WE SURVEYED

**800**

IT Decision Makers,  
including CIOs and CISOs

**400**

Business Decision Makers,  
including CEOs

**USA**

**UK**

**Germany**

## CTRL-Z

CTRL-Z is a globally recognised means of saying “undo.” It is an instinctive action when we make a mistake — and a metaphor for security, control and agility.

**83%**

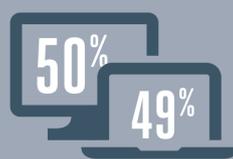

of ITDMs have wished they had an undo button to erase a security breach.

**79%**

of BDMs have wished they had an undo button to remove all traces of an IT mistake they've made.

## YOU NEED TO SPOT RISK SOONER

According to ITDMs and BDMs, almost half of all corporate data is held on endpoint devices.

At the same time, 75% of CEOs and 52% of BDMs admit that they use unauthorized applications/ programs.

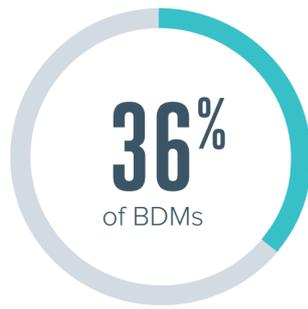

91% of CEOs and 83% of BDMs believe their actions could be considered a security risk to their organization.

**It will be up to CIO/CISOs to help their businesses adapt to the realities of the new threatscape in 2017, say 66% of BDMs and 65% of ITDMs. The question is, if not the CIO or CISO, then who should take leadership on this front?**

## THE ENTERPRISE MUST BE ABLE TO ALWAYS BOUNCE BACK

say losing all the data at the endpoint could destroy their business.

At the same time, the threat landscape is ever-expanding and increasingly focused on the enterprise. Many enterprises admit to suffering a breach in the last 18 months:

**51%** of BDMs  
**45%** of ITDMs

admit their companies have suffered a recent breach.

It's not if your business will experience a breach, it's when. Are you capable of a rapid response to reverse the potentially business-destroying consequences of a **significant data loss?**

## PRODUCTIVITY IS DIRECTLY LINKED TO THE ENTERPRISE'S ABILITY TO MOVE FORWARD FASTER

Commitment to backup isn't in question. It is whether you can get back what you lost that matters.

**95%**

of enterprises have server backup in place.

**80%**

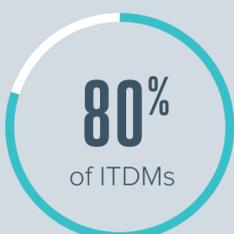

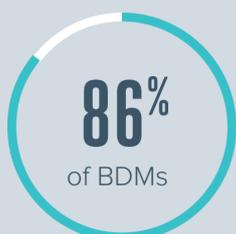

also have endpoint backup in place.

**At least one in 20**

ITDMs haven't tested server backup.

**At least one in 10**

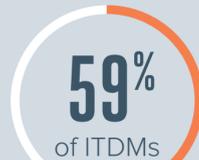

ITDMs haven't tested their endpoint backup.

do have a breach recovery plan in place.

At least 18% of ITDMs admit they have never tested their breach recovery plans.

Despite this, 59% are confident they could restore business continuity within 24 hours, but can they?

**Ultimately, 88% of enterprise ITDMs and 83% of BDMs believe that their companies will have to improve their breach recovery ability in the next 12 months!**

**In the modern data-driven economy, security and productivity are intrinsically linked.**

**Recovery — and not prevention — is the way forward.**

**Code42 is your CTRL-Z!**
